(CEPE-) CEPEP AB.

This invention relates to a novel method of identifying, designing, detecting, and/or verifying novel cell-penetrating peptide (CPP) based assessment of bulk property value Z-E of sequences of CPP comprising 5

9 9

Disclosure; Page 31; 148pp; English.

Predicting, designing, detecting, and/or verifying novel cell-penetrating peptide based on assessment of bulk property value of sequences of cell-penetrating peptide.

```
cytostatic, tranquilies, immunosuppressive, antidepressant, can anticonvulsant, antinflammatory, analyssic, neuroleptic, cophthalmological or antiuncer activity as a stimulator of cell-cophthalmological or protein and/or a cell-penetrating fragment of a peptide or protein. In addition, the invention may be useful for checking cellular penetration properties of a peptide, for producing a cell-copentrating and functional protein-minicking peptide and for de novo cellular penetrating and functional protein-minicking and/or and cell-penetrating and functional protein-minicking peptide.

CC design and production of an artificial cell-penetrating and for an activitional protein-minicking peptide.

CC compositions developed within the scope of the present invention may be cuseful for treating infectious diseases, diabetes type I, diabetes type II, Alzheimer's disease or disorders resulting from perturbed signal cransduction. The method of the invention is fast, efficient and reliable for intentioning, detecting, designing CPPs and for screening cellular cuptake of a broad variety of CPPs in vitro and in vivo. The present content of a peptide which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to peptides that modulate natural beta-amyloid peptide aggregation. The modulators of the invention comprise a peptide preferably based on a beta-amyloid peptide, that is comprised entirely of D-amino acids. Preferably the peptide comprises 3-5 D-amino acid residues and includes at least two D-amino acid residues independently selected from the group consisting of D-leucine, D-phenylalanine and D-valine. Preferred amino-terminal modifying groups include cyclic, heterocylic, modifying groups include cyclic and branched alkyl groups. Preferred carboxy-terminal modifying group or a hydroxy group. The peptides may be used to treat aside group or a hydroxy group. The peptides may be used to treat disorders associated with beta-amyloidosis, especially Alzheimer's disease. They may also be used in methods for detecting the presence of beta-amyloid peptides in biological samples. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptide compounds which are preferably based are useful in treatment of disorders related especially Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pindeis MA, Gefter ML, Musso G, Signer ER, Wakefield a Molineaux S, Chin J, Lee J, Kelley M, Komar-Panicucci Arico-Muendel CC, Phillips K, Hayward NJ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to peptides that modulate natural beta-amyloid peptide aggregation. The modulators of the invention comprise a peptide preferably based on a beta-amyloid peptide, that is comprised entirely of D-amino acids. Preferably the peptide comprises 3-5 D-amino acid residues and includes at least two D-amino acid residues independently selected from the group consisting of D-leucine, D-phenylalanine and D-valine. Preferred amino-terminal modifying groups include cyclic, heterocylic, polycyclic and branched alkyl groups. Preferred carboxy-terminal modifying groups include an amide group, an alkyl amide group, an aryl amide group or a hydroxy group. The peptides may be used to treat disorders associated with beta-amyloidosis, sespecially Alzheimer's disease. They may also be used in methods for detecting the presence of beta-amyloid peptides in biological samples. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes a compound of formula A-(Xaa)-B, comprising a peptidic structure (Xaa), an amino-terminal modifying group (B). AN49973 to AN49994 (C) (A); and a carboxy-terminal modifying group (B). AN49973 to AN49994 (C) represent specifically claimed examples of (Xaa). Also described is a method for inhibiting aggregation of natural beta-amyloid peptides and CC treating Alzheimer's disease, comprising contacting the amyloid peptides (C) with A-(Xaa)-B, and a method for detecting the presence of natural beta-amyloid peptides in a biological sample by contacting with A-(Xaa)-B. The CC compound is useful for treating Alzheimer's disease and for detecting the gresence of natural beta-amyloid peptides in a biological sample. The CC compound can also be used prophylactically or therapeutically to treat CC other clinical occurrences of beta-amyloid deposition, such as in Down's syndrome individuals and in patients with hereditary cerebral haemorrhage with amyloidosis-Dutch-type (HCHWA-D). The present sequence represents an CC example of the compound from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The beta-amyloid modulator compounds of the invention comprise a peptide, preferably based on beta-AP, that is composed entirely of D-amino acids. The modulators of the invention are useful for treating a disorder associated with beta-amyloidosis such as Alzheimer's disease. The present sequence is an inverse isomer mutant (V18F; A2IL) of Abeta peptide. Beta AP is a cleavage product of beta amyloid precursor protein (APP-770; residues 17-21)

The invention is useful for producing a prodrug which involves linking a drug which contains a primary amine to the peptide, in which the linking of the peptide to the drug inhibits the therapeutic activity of the drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Natural beta-amyloid peptide; aggregation inhibition; beta-amyloidosis; Alzheimer's disease; beta-amyloid deposition; Down's syndrome; hereditary cerebral haemorrhage with amyloidosis-Dutch-type; HCHWA-D;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New peptides containing cleavage sites specifically cleaved by human kallikrein 2, useful for producing prodrugs which treat hK2-producing cell proliferative disorders without exhibiting non-specific toxicity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 29-JUN-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-AUG-2002.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US2002103134-A1.

CC beta-amyloidosis, e.g. Alzheimer's disease. The compound is also useful
C for detecting the presence or absence of natural beta-amyloid peptides in
CC a biological sample, by contacting the biological sample with the
CC compound in vitro, where the compound is labelled with a detectable
CC substance and detecting the compound bound to natural beta-amyloid
CC peptides. The compound is preferably labelled with radioactive technetium
CC or radioactive lodine and is administered to the subject. The compound is
CC also useful for prophylactically or therapeutically treating other
CC clinical occurrences of beta-amyloid deposition such as in Down's
CC syndrome individuals and in patients with hereditary cerebral haemorrhage
CC with amyloidosis-Dutch-type (HCMA-D), and for therapeutically allowing
CC for the sequestration of beta-amyloid proteins at sites that do not lead
CC compound impairment. This sequence represents a natural beta-
CC amyloid peptide modulator compound of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                     The present invention relates to a peptide comprising an amino acid sequence having a cleavage site specific for an enzyme having a proteolytic activity of human kallikrein 2 (hK2), and which is up to 20 amino acids in length. The invention is useful for producing a prodrug which involves linking a drug which contains a primary amine to the peptide, in which the linking of the peptide to the drug inhibits the therapeutic activity of the drug

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                            The present invention relates to a peptide comprising an amino acid sequence having a cleavage site specific for an enzyme having a proteolytic activity of human kallikrein 2 (hK2), and which is up to 20 amino acids in length. The invention is useful for producing a prodrug which involves linking a drug which contains a primary amine to the peptide, in which the linking of the peptide to the drug inhibits the therapeutic activity of the drug
                                                                                                                                                                                                                                                                                                                                                                                                                                          New peptides containing cleavage sites specifically cleaved by human kallikrein 2, useful for producing prodrugs which treat hK2-producing cell proliferative disorders without exhibiting non-specific toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      28-JUL-2000; 2000WO-US040496
